According to our (Global Info Research) latest study, the global Cerebroprotein Hydrolysate for Injection(?) market size was valued at US\$ 435 million in 2023 and is forecast to a readjusted size of USD 842 million by 2030 with a CAGR of 10.0% during review period.

Cerebroprotein Hydrolysate for Injection(??) is a peptide neurotrophic drug unique to the brain. It can act on the central nervous system in various ways, regulate and improve neuronal metabolism, promote synapse formation, induce neuronal differentiation, and further protect nerve cells from various ischemic and neurotoxin damage. The drug can pass through the blood-brain barrier, promote protein synthesis in the brain, affect the respiratory chain, have anti-hypoxia protection ability, and improve brain energy metabolism. It activates adenylate cyclase and catalyzes other hormone systems. It provides neurotransmitters, peptide hormones and coenzyme precursors.

The Cerebroprotein Hydrolysate drug market is experiencing growth, driven by the rising prevalence of neurological disorders such as Alzheimer's disease, Parkinson's disease, and traumatic brain injuries, particularly among aging populations. These drugs, derived from animal brain proteins, are used to support neuroprotection, enhance cognitive function, and promote recovery in patients with various central nervous system (CNS) conditions. Increased awareness of neurological health and the growing demand for effective neuroprotective therapies are major factors contributing to market expansion. Emerging markets in Asia-Pacific are seeing rapid adoption due to improving healthcare infrastructure and increasing incidences of neurological diseases. However, the market faces challenges such as regulatory scrutiny over the use of animal-derived products, potential adverse effects, and competition from alternative neurotherapeutic agents. Continuous research and development, along with

advancements in biotechnology, are expected to shape the market's future trajectory.
