According to our (Global Info Research) latest study, the global Cerebroprotein Hydrolysate Drug market size was valued at US\$ 243 million in 2023 and is forecast to a readjusted size of USD 439 million by 2030 with a CAGR of 8.9% during review period.

Cerebroprotein Hydrolysate is used in the treatment of stroke, head injury and Alzheimer's disease. Cerebroprotein Hydrolysate is a nerve repairing medicine. It works on the brain by repairing the nerve cells and improves their survival.

The Cerebroprotein Hydrolysate drug market is experiencing growth, driven by the rising prevalence of neurological disorders such as Alzheimer's disease, Parkinson's disease, and traumatic brain injuries, particularly among aging populations. These drugs, derived from animal brain proteins, are used to support neuroprotection, enhance cognitive function, and promote recovery in patients with various central nervous system (CNS) conditions. Increased awareness of neurological health and the growing demand for effective neuroprotective therapies are major factors contributing to market expansion. Emerging markets in Asia-Pacific are seeing rapid adoption due to improving healthcare infrastructure and increasing incidences of neurological diseases. However, the market faces challenges such as regulatory scrutiny over the use of animal-derived products, potential adverse effects, and competition from alternative neurotherapeutic agents. Continuous research and development, along with advancements in biotechnology, are expected to shape the market's future trajectory.
