Abstracts

According to our (Global Info Research) latest study, the global Charging Pile Side Charging Controllers market size was valued at US\$ 118 million in 2024 and is forecast to a readjusted size of USD 305 million by 2031 with a CAGR of 15.8% during review period.

Charging Pile Side Charging Controllers (SECC) are installed on the charging pile side. When the charging pile is charging the electric vehicle, SECC interacts with EVSE, sends and receives information through communication with EVSE, and confirms whether the current charger can provide charging services and whether the electric vehicle is in a state where it can be charged. The required information is also exchanged during the charging process.
