Abstracts

Architectural Membrane is called “The fifth generation building materials”, which is the most important part of large-span spatial structures of this kind. Architectural membrane material is commonly formed with matrix and high polymer, which means that it is the outcome of bonded matrix and high polymer in desired thickness and width through specific process. Generally, it is divided into PVC membrane material, PVFE membrane materials and so on. And architectural membrane material is widely applied in large public facilities, such as stadium roof system, airport hall, exhibition center, site, landscape pavilion shed etc.
