Abstracts

Conveyor belts are primarily employed for carrying objects, from one point to another. The belts typically comprise two or more pulleys to rotate a belt in continuous circles. The material to be transported is placed on the belt and is carried to the end point on the belt. Commonly, two pulleys are employed for functioning of one conveyor belt one of the pulleys is rotated and it drives the other pulley while it is rotating. The belts are generally used for transportation in close distances, generally within a building.
