## Abstracts

Low emissivity coated glass is also called Low

E glass. Low

E glass is a kind of glass whose surface is coated with low emissivity coating silver and metal

oxide film so that the glass takes on different colors. Its main functions are to reduce the U value of glass, selectively reduce  $S_c$  and comprehensively improve energy saving property of glass. Its main features: high infrared reflectivity, ability to directly reflect far infrared thermal radiation, low surface emissivity, weak ability to absorb external energy, hence little reradiated heat energy; wide range of shading coefficient SC, and ability to control sun light transmittance according to needs to cater to requirements of different areas. It can be divided into high transmission low

E glass and sun shading low

E glass.
