## Abstracts

Plywood is a sheet material manufactured from thin layers or 'plies' of wood veneer that are glued together with adjacent layers having their wood grain rotated up to 90 degrees to one another. Plywood has been one of the most recognized and trusted wood building products for decades. Manufactured from thin sheets of cross-laminated veneer and bonded under heat and pressure with strong adhesives, plywood panels have superior dimensional stability and an excellent strength-to-weight ratio and are highly resistant to impacts, chemicals, and changes in environmental temperature and humidity.
