Abstracts

Polymer based thermal interface materials (TIM) are polymer based materials used for supporting heat sink to remove heat from the heat sources in various equipment. They are generally used in the form of a secondary thermally conductive material to replace the thermally insulating air between the two surfaces. Besides helping in the efficient transfer of heat, TIM also act as adhesives and strengthen the mechanical link between surfaces. Polymer-based TIM are the most commonly used TIM, and owing to their superior conductive and adhesive properties, they find extensive usage for thermal management applications in various industrial sectors, including electrical and electronics, telecom, and automotive.
