Chitosan hemostatic materials are a type of biomedical materials based on natural chitosan, which are mainly used to accelerate hemostasis and promote wound healing. Chitosan is a natural polysaccharide extracted from the shells of crustaceans, which has good biocompatibility, antibacterial and degradability. Its hemostatic mechanism includes promoting platelet aggregation, accelerating blood clot formation and constricting blood vessels. Chitosan hemostatic materials are widely used in surgical operations, trauma emergency treatment and the treatment of chronic trauma, and have multiple functions of rapid hemostasis, reducing infection and promoting tissue repair.
