A circulating lift is a special material handling equipment that realizes vertical transportation of materials through a circular motion. Unlike traditional vertical lifts, a circulating lift can continuously transport items without stopping and going up and down on each floor like an elevator. A circulating lift usually consists of one or more transport platforms that circulate in a closed track system. The materials are placed on the platform and transported to the required height as the platform moves. This lift is particularly suitable for occasions where continuous material transportation is required, which can improve transportation efficiency and space utilization.
