A circulating pallet conveyor is an automated material handling device that transports pallets through a circulating conveyor belt or chain to achieve continuous vertical or horizontal conveying of materials. This type of conveyor is particularly suitable for occasions that require high-efficiency and high-density material handling. A circulating pallet conveyor usually consists of one or more conveying units, which can be conveyor belts, chains or rollers, which form a closed circulation system. The pallet circulates in the system, and the material can be placed on the pallet and transported to the destination as the pallet moves.
