Client protection solutions help enterprises protect their customers from end-user data breaches and protect websites from threats related to vulnerable source code. These solutions analyze script behavior in real-time, provide actionable insights in a single dashboard view, and issue alerts to mitigate harmful script activity. These front-end security tools enable organizations to view and control first- and third-party website code, reducing the risk of supply chain fraud and preventing data breaches and client-side attacks. They identify and prevent web-stealing attacks and protect websites from malicious script injection and unauthorized third-party data collection. Client protection software protects against client-side attacks including keylogging, form hijacking, cross-site scripting (XSS), data harvesting (PII harvesting), digital theft, and Magecart. These tools ultimately help businesses comply with PCI DSS and other financial and data privacy regulations.
