Abstracts

According to our (Global Info Research) latest study, the global Clock Chip market size was valued at US\$ 902 million in 2024 and is forecast to a readjusted size of USD 1284 million by 2031 with a CAGR of 5.2% during review period.

The clock chip is a high-performance, low-power, real-time clock circuit with RAM. The clock chip can run time for the year, month, day, Sunday, hour, minute, and second, with leap year compensation function, and the operating voltage is 2.5V ~5.5V. It uses a three-wire interface to communicate synchronously with the CPU operation, and can use bursts to transfer multiple bytes of clock signals or RAM values at a time.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0% year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.
