A Closed System Intermittent Catheter (CSIC) is a type of urinary catheter designed for single-use, sterile, and intermittent catheterization. It includes a pre-lubricated catheter that is enclosed within a sterile collection bag or a sheath. This system reduces the risk of contamination and infection compared to open catheterization techniques.

The Closed System Intermittent Catheter market is experiencing notable growth, driven by increasing awareness of urinary incontinence and improved healthcare infrastructure. Major sales regions include North America and Europe, attributed to advanced medical facilities and high healthcare expenditure. Asia-Pacific is emerging as a lucrative market, fueled by rising healthcare investments and a growing elderly population. Market opportunities are abundant in developing regions due to unmet medical needs and expanding healthcare access. However, challenges such as stringent regulatory requirements, high costs, and limited awareness in low-income countries may impede market expansion.
