According to our (Global Info Research) latest study, the global Clumping and Non Clumping Cat Litter market size was valued at US\$ 391 million in 2024 and is forecast to a readjusted size of USD 481 million by 2031 with a CAGR of 3.0% during review period.

Clumping cat litter is litter made of natural minerals that absorb moisture to form clumps. These minerals start clumping when in contact with a cat's liquid waste. Non-clumping cat litter is litter that does not form clumps when it comes in contact with cat feces and urine. It's made of corn kernels, wheat, shredded paper, wood, or pine that can absorb moisture without forming clumps.

Pet medical care is the second largest segment in pet industry. In the UK, annual spending on veterinary and other pet services has risen from ?2.6bn in 2015 to ?4bn in 2021, a 54% increase in just six years. According to Vetnosis, the value of the global animal health industry will increase by 12% to \$38.3 billion in 2021. White Paper on China's Pet Healthy Consumption of JD shows that in 2023, there are 13.09 million pets entering middle age and old age. And pet aging is expected to be seen in the next few years. Changes in the age structure of pets will further bring about the development of the pet medical industry. According to the data of the 2022 China Pet Medical Industry White Paper, from the perspective of market size, the scale of China's pet medical market is about ?67.5 billion, accounting for about 22.5% of the entire pet industry. From the perspective of hospital operation time, pet hospitals within 5 years accounted for about 73%. About 11% of the pet hospitals have been in operation for more than 10 years. From the perspective of hospital turnover, nearly 40% of the hospitals have increased their annual turnover year-on-year, and the growth rate is mainly within

626%. With the increasing popularity of pet cats in many households, the cat litter market has been undergoing continuous evolution. When it comes to choosing cat litter, clumping and non-clumping cat litter are two common options. Clumping cat litter has gained growing popularity due to its convenient cleaning and odor-reducing features. This type of litter quickly forms solid clumps that encapsulate urine and feces, allowing owners to easily scoop them up. On the other hand, non-clumping cat litter prioritizes absorbency, but cleaning it might be more time-consuming and labor-intensive. Despite clumping cat litter holding a significant market share, non-clumping cat litter still finds favor among certain consumers, particularly those who prioritize litter cost and environmental factors.
