CMC-Li Lithium Battery Binder (CMC-Li, Carboxymethyl Cellulose-Lithium) is a binder designed for lithium-ion batteries. It is mainly formulated by sodium carboxymethyl cellulose (CMC) and the electrode materials of lithium-ion batteries. CMC is a water-soluble natural polymer compound, usually derived from cellulose. It has excellent biodegradability, renewability and environmental protection, so it is widely used in various applications. In lithium batteries, CMC-Li binder is mainly used in battery electrodes (positive or negative) to help the active material maintain a stable combination with the conductive additive and the metal current collector, ensuring that the battery can work stably for a long time during the charge and discharge process.
