According to our (Global Info Research) latest study, the global CMOS mmWave Radar Chip market size was valued at US\$ 277 million in 2023 and is forecast to a readjusted size of USD 521 million by 2030 with a CAGR of 8.7% during review period.

CMOS millimeter-wave radar chip is a millimeter-wave radar chip manufactured using CMOS (complementary metal oxide semiconductor) technology. This chip can generate, receive and process millimeter-wave signals to measure parameters such as distance, speed and angle. The millimeter-wave radar chip transmits millimeter-wave signals through the antenna and receives the signals reflected by the target object, and then obtains relevant information about the target object after a series of processing and analysis. CMOS millimeter-wave radar chips have the advantages of high integration, low cost and low power consumption, so they have broad application prospects in the fields of autonomous driving, smart home, security monitoring, etc.
