A coating busbar, also known as a coated busbar, is a type of electrical conductor that consists of a busbar (usually made of copper or aluminum) with a special coating applied to its surface. The coating serves multiple purposes. It can enhance the electrical insulation properties of the busbar, reducing the risk of electrical leakage and short circuits. Additionally, the coating can protect the busbar from corrosion, oxidation, and mechanical damage, thereby improving its durability and extending its service life. Common coating materials include insulating polymers, epoxy resins, and other protective substances. Coating busbars are widely used in various electrical systems, such as power distribution systems in buildings, industrial facilities, and electrical equipment, where they play a crucial role in safely and efficiently transmitting electrical power.
