According to our latest research, the global Cold Plate Liquid Cooling Server Solutions market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

Liquid-cooled servers are servers that have liquid injected into them and use heat exchange to remove heat from them. In terms of the physical form of the servers, there are two types: cold plate liquid-cooled servers and fully immersed liquid-cooled servers. As artificial intelligence companies and organizations place increasing demands on the construction and computing power of intelligent computing centers, the energy consumption of IT equipment in such data centers has increased significantly, and efficient cooling systems are needed to maintain a suitable operating temperature. Otherwise, it will pose a huge challenge to the cycle management and operation and maintenance of large-model products. From an industry perspective, the Internet industry is still the largest buyer in the liquid-cooled server market.
