## Abstracts

According to our latest research, the global Commercial Carbon Capture, Utilisation and Storage (CCUS) market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

Commercial Carbon Capture, Utilization, and Storage (CCUS) involves the deployment of technologies and systems that capture carbon dioxide (CO<sub>2</sub>) emissions from industrial sources, power plants, and even directly from the air. These captured emissions are then either utilized in various industrial applications or stored underground to prevent their release into the atmosphere. The commercialization of CCUS is driven by the need to reduce greenhouse gas emissions and combat climate change while creating economic opportunities.
