According to our latest research, the global Commodity/Energy Trading, Transaction, and Risk Management (CTRM/ETRM) Software market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

Commodity/energy trading, transaction, and risk management (CTRM/ETRM) software manages all activities related to the buying and selling of commodities such as oil, grains, metals, and other refined products. CTRM/ETRM helps companies plan when to buy or sell commodities, track pricing, and the volumes of commodities processed. Since commodities are traded on platforms similar to a stock exchange, their prices fluctuate, and companies need to manage the risk of losing money. This type of software is mostly used for procurement professionals who need to purchase raw materials and other commodities that their company needs to function. CTRM/ETRM can be integrated with accounting software and ERP systems to manage the financial aspects of trading. Integration with supply chain suites is also required to track the demand for commodities and inventory availability.
