According to our (Global Info Research) latest study, the global Common Mode Choke Inductors market size was valued at US\$ 643 million in 2024 and is forecast to a readjusted size of USD 1004 million by 2031 with a CAGR of 6.6% during review period.

Common mode choke inductors consist of two or more coils of insulated wire on a single magnetic core. Each winding is put in series with one of the conductors. This means that the magnetic fields of the wires combine to present high impedance to the noise signal.

Common mode choke coils are often used in switching power supply equipment to eliminate common mode electromagnetic interference signals. It is an inductor used in circuits to block high-frequency alternating current (AC) while allowing low-frequency direct current (DC) to pass through. Chokes are usually made of insulated wire wound around a magnetic core. To suppress interference emissions, common mode chokes are also used. Additionally, with the growing use of electronic products such as mobile phones, tablets, laptops, and IoT devices, the need for noise reduction in electronic circuits is also growing. Common mode chokes help suppress electromagnetic interference (EMI) and radio frequency interference (RFI) in electronic equipment, improving efficiency and reliability. Rising technological advancements in the global industry are expected to drive the expansion of the common mode choke coil market over the forecast period. Rising demand from the automotive and transportation industries coupled with increasing adoption of common mode choke coils in consumer electronics is fueling the development of common mode choke coils, further driving the market growth. Furthermore, one of the major factors contributing to the growth of the common mode choke coil market is the increasing need for noise reduction in electronic

equipment. In addition, worldwide awareness of the effects of climate change and the need to limit greenhouse gas emissions is growing. As a result, there is a greater need for clean energy sources such as solar systems and wind turbines. With the increasing adoption of industrial automation and control systems in the fields of transportation, aerospace, production process, and medical services, the demand for common mode choke coils market is expected to grow exponentially over the forecast time frame. Additionally, common mode choke technology has advanced significantly in recent years, increasing the efficiency and functionality of these electrical components. In addition to the introduction of more compact and efficient magnetic cores, the overall size of common mode chokes has shrunk dramatically over the years. The most important function of common mode chokes is to mitigate EM interference, and technological breakthroughs have improved the quality of EMI reduction.
