Compact Compressor Nebulizer is a medical device designed to deliver medication in the form of a fine mist that can be inhaled into the lungs. It is used to treat respiratory conditions such as asthma, chronic obstructive pulmonary disease (COPD), and other lung diseases.

The compact compressor nebulizer consists of a small compressor unit, a medication cup, and a mouthpiece or mask. The compressor generates compressed air, which is used to convert the liquid medication in the cup into an aerosol mist. The mist is then inhaled through the mouthpiece or mask, delivering the medication directly to the airways and lungs.
