According to our (Global Info Research) latest study, the global Composite Hernia Patch market size was valued at US\$ 112 million in 2024 and is forecast to a readjusted size of USD 149 million by 2031 with a CAGR of 4.2% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The composite hernia patch is made from a combination of polypropylene (PP) monofilament mesh and a polylactide-co-caprolactone (PLCL) film. The PP mesh provides excellent mechanical strength and structural support, while the PLCL film offers partial absorbability, reducing foreign body reactions and aiding in tissue healing. This patch is ideal for various types of hernia repairs, especially in cases where durable support and adhesion reduction are required.
