According to our (Global Info Research) latest study, the global Compressed Air Leak Detection market size was valued at US\$ 1224 million in 2024 and is forecast to a readjusted size of USD 3190 million by 2031 with a CAGR of 7.6% during review period.

Compressed air leak detection is the process of identifying and locating leaks in compressed air systems to improve efficiency, reduce energy costs, and prevent equipment wear. Leaks can occur in pipes, valves, fittings, and connections, often resulting in significant energy waste and increased operational costs. Advanced detection methods include ultrasonic leak detectors, which pick up high-frequency sounds produced by escaping air, and thermal imaging cameras, which detect temperature changes caused by leaks. Regularly monitoring and addressing compressed air leaks ensures optimized system performance, prolongs equipment life, and supports sustainable operations by reducing unnecessary energy consumption.
