According to our latest research, the global Computer-aided Manufacturing (CAM) Software market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

Computer-Aided Manufacturing (CAM) software is a type of software used to control machine tools and related machinery in manufacturing processes. CAM software takes digital designs or CAD (Computer-Aided Design) models and converts them into instructions that guide the manufacturing process. These instructions typically involve toolpaths, machining strategies, and other parameters necessary for cutting, milling, turning, or otherwise shaping materials into finished products. CAM software often integrates with CAD software, allowing seamless transfer of design data from the design phase to the manufacturing phase. This integration helps streamline the production process and ensures that the final product matches the intended design accurately.
