According to our (Global Info Research) latest study, the global Computer Case Fans market size was valued at US\$ 524 million in 2023 and is forecast to a readjusted size of USD 652 million by 2030 with a CAGR of 3.4% during review period.

Computer case fans, as key heat dissipation components inside the computer, are carefully installed inside the case to keep all internal components running at a suitable operating temperature. Generally speaking, these fans are cleverly placed at the front of the case. Their design principle is to inhale cool air from the front and blow it to the area above the motherboard. Finally, with the help of the power fan, the hot air is effectively discharged outside the case, thus forming an efficient air convection system.

The core functions of the case fan widely cover the efficient heat dissipation of the CPU and graphics card, the comprehensive cooling of the hard disk and motherboard, and the prevention of possible local overheating inside the case. Through this sophisticated heat dissipation mechanism, not only the stable operation of the computer under high-intensity work is ensured, but also the service life of the internal components is greatly extended.

The main trends in the computer case fan market in the future are as follows:

1. With the increase in CPU application power, cooling component manufacturers must continue to develop products with higher cooling wattage and better performance, and solve the cooling problems caused by product applications through process improvement and material research and development. At the same time, downstream system manufacturers must respond to new product launch plans and launch new products that meet the needs in a timely manner.
2. Coolers/fans, chassis and power supplies are important components of the e-sports hardware market. High-end computers have higher requirements for heat dissipation

and power supply, so they are generally equipped with high-end radiators, chassis and power supplies to ensure strong and stable computer performance. The stable demand in the computer professional application hardware market has driven the stable growth of the cooler/fan, chassis fan and power supply market.

3. E-sports is one of the main application scenarios of the company's products. Most e-sports software has relatively high requirements for computer hardware, and high-end CPUs and graphics cards are required to support the smooth and stable operation of e-sports software under high special effects. To run high-end hardware, you need to buy high-end coolers/fans, chassis, power supplies and other equipment.
