Computer Perimeter refers to a medical device used in ophthalmology for the assessment of the visual field of the eyes. It is a sophisticated instrument that combines computer - controlled technology and optical principles. Structurally, it consists of a display unit that presents visual stimuli such as light points or patterns to the patient's eyes. These stimuli can vary in terms of intensity, size, color, and position within the visual field. There is also a response - capturing system that records the patient's reaction when they perceive the stimuli.
