## Abstracts

According to our (Global Info Research) latest study, the global Contactless Blood Leak Detector market size was valued at US\$ 58 million in 2024 and is forecast to a readjusted size of USD 79.1 million by 2031 with a CAGR of 4.6% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The working principle of contactless blood leak detectors is usually based on optical, electromagnetic or other non-contact sensing technologies. These technologies can sense and detect the presence of blood without physical contact with the blood. Specifically, the sensor emits a specific type of signal (such as light waves, electromagnetic waves, etc.). When these signals encounter blood, specific reflection, absorption or scattering effects occur. The sensor detects blood leaks by capturing changes in these effects.
