The contrast sensitivity device industry focuses on the field of visual health, and specific products include contrast sensitivity assessment devices, such as CSV-1000. These devices are mainly used to diagnose ophthalmic diseases, such as refractive errors, amblyopia, and glaucoma. The core function of the contrast sensitivity device is to evaluate the visual function of the human eye at different spatial frequencies and contrasts. In short, it is the ability of the human eye to distinguish blurred visual targets. When using it, the patient needs to distinguish targets (such as vertical lines) at different contrasts and spatial frequencies. The test results can reflect the performance of the human eye in various visual environments and have important clinical application value.
