## Abstracts

According to our (Global Info Research) latest study, the global Coupling Beam Damper market size was valued at US\$ 75.9 million in 2024 and is forecast to a readjusted size of USD 91.8 million by 2031 with a CAGR of 2.7% during review period.

The Coupling Beam Damper is named after the location where it is typically installed on the connecting beams of a building. Coupling beams are beams that connect shear walls in buildings. Under dynamic loads such as earthquakes, coupling beams can coordinate the deformation between shear walls. The continuous beam damper utilizes its own mechanical properties, such as viscosity, elasticity, or friction, to dissipate seismic energy and reduce the seismic response of the structure.
