Crab larvae breeding refers to the process of reproducing, hatching, and cultivating crab species (such as the Chinese mitten crab, mud crab, and king crab) through artificial environmental control and genetic selection. Its core product is crab larvae, which are the larvae from fertilized eggs to juvenile crabs. This ensures a stable supply in the aquaculture process, prevents the depletion of wild resources, and improves aquaculture efficiency and economic benefits. The average price of this product is approximately US\$60 per thousand crabs, with global sales of approximately 13.7 billion crabs.
