According to our (Global Info Research) latest study, the global Data Science as a Service market size was valued at US\$ 2225 million in 2025 and is forecast to a readjusted size of US\$ 3474 million by 2032 with a CAGR of 6.6% during review period.

To address the problems of insufficient enterprise data analysis capabilities, a shortage of professional talent, and high investment in technical infrastructure, Data Science as a Service (DSaaS) has emerged. Since the rise of cloud computing in the early 21st century, accompanied by the maturation of machine learning platforms and automation tools, the field of data intelligence applications has entered a phase of accelerated development. Currently, DSaaS has developed into a multi-layered service system encompassing cloud computing power, pre-built models, automated machine learning platforms, and end-to-end analytical solutions. It is widely used in areas such as financial risk control, intelligent marketing, industrial predictive maintenance, and business decision optimization, providing a professional cloud service model that significantly lowers the threshold for data intelligence applications, improves analysis efficiency, and enhances business value.
