The Dental Phosphor Plate System is a specialized system for dental image acquisition and processing based on the storage and reading of fluorescent substances, mainly phosphorus particles. The Dental Phosphor Plate System utilizes a Storage Phosphor Plate (SPP or IP plate) as an image receiver. The Dental Phosphor Plate System utilizes the Storage Phosphor Plate (SPP or IP Plate) as an image receiver by receiving X-ray radiation and storing latent images in the phosphor substance, which are subsequently read using laser scanning technology and converted into digital images for subsequent diagnosis and analysis. The system combines digital imaging technology with the needs of dental medicine to provide dentists with an efficient, low-radiation, high-quality imaging solution.
