## Abstracts

According to our (Global Info Research) latest study, the global Dental Suction Machine market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A Dental Suction Machine is an essential tool used in dental procedures to remove saliva, blood, debris, and other fluids from a patient's mouth, ensuring a clear working area for the dentist. It enhances visibility, maintains a sterile environment, and prevents patients from swallowing excess fluid during treatment.

Dental suction machines can be divided into two categories: fixed/centralized suction systems and portable suction machines, which are described as follows:

1. Fixed/centralized suction systems - Fixed/centralized suction systems are suitable for medium and large dental clinics, especially multi-chair clinics and complex oral surgeries, and the price range is usually \$1,500 - \$8,000. These systems have strong suction power and can handle liquids and gases generated during surgery, providing efficient suction effects. They are mainly used in scenarios such as dental surgery, oral surgery, and routine care, and include dry and wet suction systems. Some high-end systems also have digital control functions, which are suitable for smart clinics.
2. Portable suction machines - Portable suction machines are compact and easy to

carry, with a price range of \$800 - \$2,000. They are suitable for mobile clinics, small clinics, or emergency treatments, and are usually used for daily dental care and simple operations. Although portable suction machines have lower suction power, their convenience makes them an ideal choice for clinics with limited space or temporary applications.
