Abstracts

According to our (Global Info Research) latest study, the global Differential Pressure Sensors market size was valued at US\$ 1968 million in 2024 and is forecast to a readjusted size of USD 2404 million by 2031 with a CAGR of 2.9% during review period.

Differential Pressure Sensors measure the difference between two pressures, one connected to each side of the sensor. Differential pressure sensors are used to measure many properties, such as pressure drops across oil filters or air filters, fluid levels (by comparing the pressure above and below the liquid) or flow rates (by measuring the change in pressure across a restriction). Technically speaking, most pressure sensors are really differential pressure sensors; for example a gauge pressure sensor is merely a differential pressure sensor in which one side is open to the ambient atmosphere.

Global differential pressure sensors main players include Honeywell, ABB, Amphenol, Panasonic, Siemens, etc., totally accounting for about 37% of the market. North America is the largest market, with a share over 32%. As for the types of products, it can be divided into digital type differential pressure sensors and analog type differential pressure sensors. The most common product is analog type differential pressure sensors, with a share over 65%. In terms of applications, it is widely used in automotive, medical, HVAC, industrial, military and defense and others. Automotive is the largest application, holding a share over 26%.
