Abstracts

According to our (Global Info Research) latest study, the global Digital Electronic Room Thermostat market size was valued at US\$ 2168 million in 2025 and is forecast to a readjusted size of US\$ 3310 million by 2032 with a CAGR of 6.3% during review period.

In 2025, global production of digital electronic room thermostats reached 20.26 million units, with an average selling price of US\$104 per unit. Digital electronic room thermostats are electronic control terminals used in room/zone air conditioning and terminal systems (such as split units, VRF indoor units, fan coil units (FCU), heat pump terminals, etc.). They collect room temperature data using temperature sensors (NTC/digital thermometers) and implement functions such as setting temperature, cooling/heating/dehumidification/air supply mode, fan speed, timer/schedule, backoff temperature, (optional) occupancy/idle and alarm via MCU/control algorithms. Control commands are sent to indoor units/valves/fans/gateways via relay switching, 0–10V/PWM proportional output, or communication bus. Applications cover residential communities, office buildings, hotels, factory workshops, warehouses, and small computer rooms. The upstream of the industry chain includes LCD/touch modules, temperature/humidity/CO₂/human body sensors, MCUs/storage, power supplies and relays/drivers, communication modules and connectors, and panel structural components; the midstream consists of manufacturers, with the production process including ODM/OEM design (hardware + firmware + UI) > SMT/assembly > calibration and burn-in > certification (different regions/building control protocols) > shipment; the downstream targets HVAC equipment manufacturers and building automation/room control system providers (hotels, offices), etc. Gross profit margin is approximately 15%–30%.
