## Abstracts

According to our (Global Info Research) latest study, the global Digital Engineering Solutions market size was valued at US\$ 1554 million in 2025 and is forecast to a readjusted size of US\$ 2225 million by 2032 with a CAGR of 5.2% during review period.

To address the problems of fragmentation in design, construction, and operation and maintenance phases, information distortion, and low project management efficiency in traditional engineering practices, digital engineering solutions have emerged. Since the popularization of computer-aided design (CAD) technology in the late 20th century, with the iterative integration of technologies such as Building Information Modeling (BIM), the Internet of Things, cloud computing, and artificial intelligence, the engineering industry has evolved from a model relying on two-dimensional drawings and discrete data to an integrated collaborative system driven by data and covering the entire project lifecycle. Currently, digital engineering solutions have developed into a system of tools encompassing multiple dimensions, including digital twins, collaborative management platforms, intelligent sensing, and algorithmic decision-making. They are widely used in smart cities, complex infrastructure, industrial facilities, and green buildings, significantly improving engineering quality, optimizing resource allocation, reducing lifecycle costs, and enabling sustainable operations, becoming a key support for driving the engineering industry towards intelligent and lean transformation.
