According to our (Global Info Research) latest study, the global Digital Intraoral Scanners market size was valued at US\$ 546 million in 2023 and is forecast to a readjusted size of USD 1133 million by 2030 with a CAGR of 11.0% during review period.

Digital intraoral scanners are advanced dental devices that utilize optical technologies to capture high-resolution three-dimensional images of the oral cavity. These scanners play a pivotal role in modern digital dentistry by enabling accurate diagnostics and facilitating treatments such as restorations, orthodontics, and implants. The captured digital impressions replace traditional molds, offering a more precise and patient-friendly approach.

Moreover, digital intraoral scanners integrate seamlessly with CAD/CAM systems and other digital workflows, streamlining the dental treatment process. This technology enhances communication between dentists, technicians, and patients while reducing the turnaround time for creating dental prosthetics and appliances.

The primary driver of the digital intraoral scanners market is the increasing demand for digital dentistry solutions, which offer greater precision and efficiency compared to traditional methods. Dental professionals and patients alike value the improved accuracy of treatment planning and the enhanced patient experience these scanners provide. The growing prevalence of dental issues, such as misalignments and cavities, coupled with advancements in technology, has led to the widespread adoption of digital intraoral scanners in both developed and emerging markets. Additionally, the integration of these devices with CAD/CAM systems and 3D printing has accelerated their use in restorative and cosmetic dentistry.

One significant challenge in the digital intraoral scanners market is the high initial cost of

the devices and the associated training requirements for dental professionals. Small and mid-sized dental clinics, particularly in developing regions, often face budget constraints that limit their ability to invest in these advanced technologies. Furthermore, the lack of standardization across different scanner models and software platforms can create compatibility issues, hindering seamless integration into existing dental workflows. These barriers may slow the market penetration of digital intraoral scanners, particularly in price-sensitive markets. The major players in global Intra Oral Scanners market include Align Technologies, Sirona, etc. The top 2 players occupy over 55% shares of the global market. Europe and North America are main markets, they occupy about 65% of the global market.
