According to our (Global Info Research) latest study, the global Direct Acting Safety Valve market size was valued at US\$ 1405 million in 2024 and is forecast to a readjusted size of USD 2428 million by 2031 with a CAGR of 8.1% during review period.

A direct acting safety valve is a type of safety valve that opens under the direct action of the working medium. That is, it relies on the force generated by the pressure of the working medium to overcome the mechanical load exerted on the valve disc by springs, weights, etc., causing the valve to open. It has the advantages of simple structure, rapid action and good reliability. However, due to its reliance on mechanical loading, the magnitude of its load is limited, so it cannot be used in high-pressure and large-diameter applications.
