Abstracts

According to our latest research, the global Directional and Rotational Atherectomy System market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

The directional atherectomy system relies on a high-speed rotating cutting catheter to cut and remove hardened plaques in the coronary artery lumen, reducing plaque volume load and eliminating coronary artery stenosis lesions. The rotational atherectomy system uses a high-speed rotating diamond grinding head to erode lesions, mainly suitable for highly calcified lesions. First, rotational grinding is performed, followed by stent placement to improve the success rate of interventional treatment and reduce the occurrence of complications.
