Abstracts

According to our (Global Info Research) latest study, the global Disposable Arteriovenous Cannula market size was valued at US\$ 399 million in 2024 and is forecast to a readjusted size of USD 860 million by 2031 with a CAGR of 11.7% during review period.

Disposable arteriovenous puncture needle is used for venipuncture in blood purification treatment of acute and chronic renal failure.

The global medical device market is estimated to be US\$603.3 billion in 2023, and is expected to grow at a CAGR of 5% over the next six years. At present, global health care expenditure accounts for about 10% of global GDP, and the proportion will continue to increase in the next few years. It is mainly due to the increasing demand for healthcare from an aging population, rising prevalence of chronic and infectious diseases, and expansion in emerging markets. In recent years, with the aging of my country's population and the continuous increase in the number of medical consultations, the demand for puncture needle consumables is also increasing. At the same time, with the continuous upgrading of clinical diagnosis and treatment, the demand for puncture needles has gradually expanded from injection and diagnosis to the application of interventional puncture devices, allowing more minimally invasive surgery to replace traditional surgery and take on the important role of establishing channels.
