Open staplers are commonly used medical devices in surgical operations. They are used to connect (anastomose) the two ends of tissues or organs. They are commonly used in surgical operations on the gastrointestinal tract, lungs, and other organs. Open staplers automatically or semi-automatically arrange staples into a series of staple lines to achieve precise tissue anastomosis. Disposable open staplers are commonly used instruments in surgical operations. They automatically arrange and close staple lines to quickly and accurately anastomose tissues, reducing surgical time and the risk of cross-infection.
