Disposable pathology blades are high-precision tools specifically used for pathology examination and research, designed for making tissue sections under a microscope. This blade is usually made of high-quality stainless steel or carbon steel and undergoes strict process processing to ensure its sharpness and consistency, so that extremely fine and flat tissue samples can be obtained during the sectioning process. The main advantage of disposable pathology blades is that they are discarded after one use, avoiding the risk of cross-infection and cumbersome disinfection process caused by traditional reusable blades, and improving the safety and efficiency of operations.
