A disposable sampling bottle is a container designed for collecting and storing various samples. It is usually made of sterile, non-contaminating materials (such as polyethylene, polypropylene, glass, etc.) to ensure that the samples are not contaminated by the outside world during collection, transportation and storage. This type of sampling bottle is widely used in environmental monitoring, food safety, chemical analysis, pharmaceutical and other industries. It has the characteristics of disposable use and can be directly discarded after use, avoiding the trouble of cross contamination and cleaning and maintenance. Disposable sampling bottles usually have good sealing performance and adaptability to ensure the accuracy and integrity of the sample.
