According to our (Global Info Research) latest study, the global DNA & RNA Polymerase market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

DNA and RNA polymerases are important enzymes involved in the replication and transcription of genetic information. They perform critical biological functions within cells. DNA polymerase is primarily responsible for replicating DNA molecules. During cell division, it replicates genetic information by synthesizing new DNA strands. RNA polymerase is responsible for transcribing DNA information into RNA, forming messenger RNA (mRNA), transfer RNA (tRNA), and ribosomal RNA (rRNA). Both play important roles in DNA modification.
