## Abstracts

According to our (Global Info Research) latest study, the global DNA Subcloning Services market size was valued at US\$ 181 million in 2024 and is forecast to a readjusted size of USD 256 million by 2031 with a CAGR of 5.2% during review period.

DNA subcloning services involve the process of isolating a specific DNA fragment from a larger DNA molecule (such as a plasmid, genomic DNA, or cDNA) and inserting it into a new vector. Specialized molecular biology techniques, including restriction enzyme digestion to cut the DNA at specific sites, DNA ligation to join the fragment to the vector, and transformation to introduce the recombinant DNA into host cells (usually bacteria), are used. These services are provided by laboratories or companies to researchers, biotech firms, and pharmaceutical companies, enabling them to manipulate and study genes, produce recombinant proteins, or develop gene - based therapies by precisely engineering DNA constructs tailored to their specific experimental or commercial needs.
