According to our (Global Info Research) latest study, the global Double Sided FPC Coverlay market size was valued at US\$ 577 million in 2024 and is forecast to a readjusted size of USD 862 million by 2031 with a CAGR of 6.0% during review period.

A flexible PCB is a kind of printed circuit board, also called a flexible printed circuit, or FPC for short. FPC is made of adhesive material or non-adhesive material. The copper used in the FPC production process is divided into electrolytic copper and rolled copper, and non-stick rolled copper is more flexible and foldable. A double-layer flexible PCB consists of two conductive layers with an insulating layer in between. A double-layer flexible PCB is an ideal product that requires circuit density.

According to our Semiconductor Research Center, the global total output value of PCB was about US\$ 81 billion in 2022. With strong drivers from new technology, such as AI, 5G and new energy vehicles, it is estimated that the PCB industry will continue to grow steadily in the next six years. Global PCB manufacturers are mainly located in China mainland, China Taiwan, Japan, South Korea, Europe and the United States. Among them, Chinese local PCB companies hold the biggest share.
