Abstracts

According to our (Global Info Research) latest study, the global Drone Batteries and Power market size was valued at US\$ 1411 million in 2023 and is forecast to a readjusted size of USD 2834 million by 2030 with a CAGR of 10.1% during review period.

Drone batteries are essential for powering drones and allowing them to fly. The type of battery used in a drone can vary depending on the size and model of the drone. Some common types of drone batteries include lithium polymer (LiPo) batteries, lithium-ion batteries, and nickel-metal hydride (NiMH) batteries. LiPo batteries are the most commonly used type of battery for drones due to their high energy density and lightweight design. These batteries are known for providing high power output and long flight times. However, they require careful handling and charging to prevent damage or overheating. Lithium-ion batteries are another popular choice for drone batteries. They are more stable and have a longer lifespan compared to LiPo batteries. However, they are heavier and have a lower energy density, which can result in shorter flight times. NiMH batteries are less commonly used in drones but are still an option for some models. They are known for their stability and reliability but have a lower energy density compared to LiPo and lithium-ion batteries. When choosing a drone battery, it is important to consider factors such as voltage, capacity, and discharge rate to ensure optimal performance and flight time.

As the cost of developing and producing drones continues to decrease, their application scope is becoming increasingly wide, with strong market demand and broad development prospects. The market size will continue to maintain rapid growth in the future. In particular, the rise of the civil drone market has driven the growth in demand for drone lithium batteries. With the further maturity of the market and the continuous

development of lithium battery technology, civil drone lithium batteries will become a highlight that promotes the rapid growth of the consumer lithium battery market.

In recent years, the drone industry has received high attention from governments at all levels and key support from national industrial policies. The country has successively introduced a number of policies to provide a clear and broad market prospect for the development of the civil drone industry, provide a good production and operation environment for enterprises, and further accelerate the development of the civil drone lithium battery market.
