According to our (Global Info Research) latest study, the global Drone Controller market size was valued at US\$ 325 million in 2024 and is forecast to a readjusted size of USD 744 million by 2031 with a CAGR of 12.7% during review period.

The goal of the controller is to realize the attitude tracking, speed tracking, fixed point tracking, path tracking and trajectory tracking of the UAV. During the flight, the controller will continuously collect and process sensor data, and use these data to judge the current state of the drone and environmental changes. According to the calculated information, the controller can calculate the action commands that need to be adjusted, such as pitch, roll, etc., and then issue instructions to drive the drone through the actuator.

As a small low-altitude aircraft, UAV has the characteristics of low flying height, slow movement speed, and small radar scattering area. According to statistics, the global drone market will maintain a steady development trend. In 2021, the global drone market size will be 26.3 billion US dollars, and the industry market size is expected to reach 41.3 billion US dollars in 2026. The use of UAVs has expanded from the military field to the civilian field, among which recreational use, technical services and commercial use are the main driving forces for the development of the UAV market. Entertainment use refers to the use of drones in games and driving experiences; technical services refer to the application of drones in agriculture, logistics, and environmental testing; commercial use refers to the application of drones in advertising, media and other industries. In addition, with the development and application of new information technology, the development of the drone industry has also been greatly promoted. In 2018, the country announced the establishment of a national drone

technology innovation center, and the government invested a lot of money to support the drone industry. development of. The development of the drone industry will drive the rapid development of related industrial chains, and industrial chains such as batteries, chips, sensors, drone software, and algorithms will benefit from the development of the drone industry.
